

MODERN IP COUNSEL. NIMBLE. PRECISE. PRACTICAL.

Intellectual property decisions rarely happen in isolation. Talem IP works with in-house legal teams, universities, established technology companies, emerging businesses, and entrepreneurs to make those decisions thoughtfully. Our technical backgrounds allow us to engage directly with engineers, scientists, researchers, and inventors, while our business-focused approach keeps the legal strategy connected to where the organization is trying to go.

We offer services in the following practice areas:

PATENTS & TRADEMARKS

We draft and prosecute patent applications for complex technologies, working closely with inventors and in-house teams to protect what makes their innovations valuable. We also protect the brands behind those innovations through focused trademark strategy and filing.

AI STRATEGY & PROTECTION

Specialized IP, licensing, and risk strategy for artificial intelligence, data, machine learning, and agentic systems.

IP STRATEGY SERVICES

Portfolio strategy and ongoing IP counseling aligned with your technology roadmap, commercial priorities, and budget.

LICENSING & TRANSACTIONS

Software, development, data, commercialization, and technology licensing agreements designed to move business relationships forward while protecting what matters.
